

# Public Works Department

April 2022—June 2022

The Public Works Department completed **232** work orders during April through June of 2022. These consisted primarily of water and sewer work orders within our Mygov system.

The Sanitation Department completed **172** Brush pick up and **77** bulk pick up requests through see-click-fix during this quarter.

There were a total of **272** requests completed through our See Click Fix app.

The Public Works Department had the following specific projects:

- Water and Sewer Crews completed the installation of the water and sewer main lines to feed up into the new town center property from Early Blvd. along Bueno Vista.
- Installed Water and Sewer taps for some of the new business developments that are under construction.
- We replaced and repaired some damaged Fire Hydrants throughout the city
- Finished running the sewer camera and taking an inventory of sewer line condition and systems that are going to be affected by new subdivision development in the City of Early
- **Additional note:** We are still seeing increased cost and lead times on anything and everything we use to keep the city infrastructure going. Along with the rise in temperatures and equipment repairs we are exhausting budgets quicker than previous years.
